

Instructions:

- **Due February 2, 11:59PM** uploaded to Blackboard as a single pdf.
- Each problem is worth $\frac{100}{\text{number of problems}}$ points.
- Start each problem on a new page and put a box around your final answer to help the grader.
- Label your file as `ENME403_S26_HW01_yourname.pdf`.
- If you use Simulink to generate results for the homework submission, include screenshots of the block diagrams and all relevant plots.
- **Use of AI Tools:** The use of AI software to prepare your submission is strictly prohibited. If we determine that AI generated a submission, the work will receive a grade of zero and will be reported to the Academic Conduct Committee. You may use AI tools to aid your understanding, but all submitted work must be entirely your own.
- Failure to follow these guidelines will result in zero points.

Learning Objective: This assignment ensures students can prepare professionally formatted technical documents using LaTeX, follow precise submission and file-naming standards, and reproduce structured engineering reports, skills that are required for all future homework, projects, and technical writing in this course.

Problem 1. Download the files from [this shared Google Drive folder](#).

Prepare the report in **LaTeX** and generate a **PDF**. Refer to the LaTeX tutorial uploaded in the *Lecture Notes* folder on Blackboard.

Your submitted PDF should match the provided reference document as closely as possible in content, formatting, and structure.

You must upload **both**

- the compiled **PDF**, and
- the corresponding `.tex` source file.

Both files are required to receive credit. If either the PDF or the `.tex` file is missing, a **grade of zero** will be recorded for this homework.

If you have questions or need help, please ask on **Piazza** or come to **office hours** well before the submission deadline.

Here is an [Overleaf project](#) you can copy to get started.
